

AMENDMENTS

Please add the following new claims:

B' Claim 95

A reclosable bag for filling with at least one food product, said reclosable bag comprising:

at least one sheet of web material having at least one fold structure, and an opening located generally opposite said fold structure;

a reclosable fastener structure including a skirt structure of skirt web material extending therefrom;

said skirt structure including a distal margin;

said distal margin being coupled to said web material at, at least one location between said fold structure and said opening;

said reclosable bag capable of being filled with at least one food product through said opening.

Claim 96

The reclosable bag of claim 95 wherein the skirt web material is integral to the reclosable fastener structure.

Claim 97

The reclosable bag of claim 95 wherein the skirt web material is coupled to the reclosable fastener structure.

Claim 98

The reclosable bag of claim 95 wherein the web material includes an outside surface and an inside surface; the inside surface including a predetermined area having a releasable adhesive material thereon whereby a peelable seal may be formed.

Claim 99

The reclosable bag of claim 98 wherein the peelable seal, when formed, is hermetic.

Claim 100

A reclosable bag for filling with at least one food product, said reclosable bag comprising:

- at least one sheet of web material;

- a reclosable fastener structure coupled to said web material; and

- said reclosable bag capable of being filled with at least one food product.

Claim 101

A reclosable bag for filling with at least one food product, said reclosable bag comprising:

- at least one sheet of web material including at least one predetermined tear area;

- at least one fold structure;

- an opening;

- a reclosable fastener structure including at least one integral skirt structure of skirt web material extending therefrom;

- said integral skirt structure including at least one distal margin;

- said distal margin being coupled to said web material;

β' said reclosable fastener structure extending past said tear area and into said fold structure wherein said fold structure encases at least a portion of said reclosable fastener structure;

said reclosable bag capable of being filled with at least one food product.

Claim 102

A reclosable bag for filling with at least one food product, said reclosable bag comprising:

at least one sheet of web material including at least one predetermined tear area;

at least one fold structure;

a reclosable fastener structure including at least one integral skirt structure of skirt web material extending therefrom;

said integral skirt structure including at least one distal margin;

said distal margin being coupled to said web material;

said reclosable fastener structure extending past said tear area and into said fold structure wherein said fold structure encases at least a portion of said reclosable fastener structure.

Claim 103

A reclosable bag for filling with at least one food product, said reclosable bag comprising:

at least one sheet of web material having at least one fold structure presenting at least two sidewall structures having inside surfaces, and an opening;

β' a reclosable fastener structure including an integral skirt structure comprising a web material extending therefrom and including opposed distal margin structures;

said web material of said integral skirt structure being sealed to said inside surfaces at a plurality of predetermined sealing areas;

a barrier web material extending between and coupled to said distal margin structures; and

a header structure, said header structure at least partially enclosing said reclosable fastener structure.

Claim 104

A reclosable bag for filling with at least one food product, said reclosable bag comprising:

at least one sheet of web material including at least two areas of structural weakness, having at least one fold structure located between and defined by said two areas of structural weakness, and an opening;

a reclosable fastener structure including a skirt structure of skirt web material extending therefrom;

said skirt structure including a distal margin;

said distal margin being coupled to said web material such that said areas of structural weakness are located between said distal margin and said reclosable fastener structure;

said reclosable fastener structure extending past said areas of structural weakness;

h' said reclosable bag capable of being filled with at least one food product through said opening.

Claim 105

A reclosable bag for filling with at least one food product, said reclosable bag comprising:

at least one sheet of web material including at least two areas of structural weakness, said areas of structural weakness being integral to said web material

an opening;

a reclosable fastener structure including a skirt structure of skirt web material extending therefrom;

said skirt structure including a distal margin;

said distal margin being coupled to said web material such that said areas of structural weakness are located between said distal margin and said reclosable fastener structure;

said reclosable fastener structure extending past said areas of structural weakness;

said areas of structural weakness defining a tear off portion, said tear off portion capable of being removed by tearing along said areas of structural weakness;

said areas of structural weakness being laid out in a pattern including an arcuate portion; and

said reclosable bag capable of being filled with at least one food product through said opening.

β' Claim 106

A reclosable bag for filling with at least one food product, said reclosable bag comprising:

at least one sheet of web material including at least two areas of structural weakness, said areas of structural weakness being integral to said web material;

a reclosable fastener structure including a skirt structure of skirt web material extending therefrom;

said skirt structure including a distal margin;

said distal margin being coupled to said web material such that said areas of structural weakness are located between said distal margin and said reclosable fastener structure;

said reclosable fastener structure extending past said areas of structural weakness; and

said areas of structural weakness defining a tear off portion.

REMARKS

The foregoing represents addition of claims supported in the specification. No new matter has been added. The claims are directed to the invention as disclosed in the specification.
